DRONA L

Bengaluru, India · +91-7022335552 · dronanaik1133@gmail.com

PROFESSIONAL SUMMARY

Associate Consultant and AI engineer with hands-on experience building agentic AI systems, multi-agent pipelines and Retrieval-Augmented Generation (RAG) solutions using the Google Agent Development Kit (ADK), Gemini models, Pinecone and Google Cloud Platform. Experienced in LLM-powered test automation, prompt engineering, knowledge graphs and enterprise integrations (SAP, Salesforce, Jira, Xray), with a strong foundation in machine learning and full-stack development. Delivers production-ready AI applications that solve real-world enterprise problems, from automated test case generation to orchestrated agent-to-agent workflows and citation-backed document Q&A.

EXPERIENCE

Associate Consultant – Agentic AI & RAG | **KPMG** *Sep 2026 – Present*

- Design and build production multi-agent AI systems with Google ADK and Gemini models on Google Cloud Platform to automate enterprise QA and test orchestration.
- Architect RAG and agentic retrieval pipelines, covering document ingestion, deduplication, embeddings and vector storage, to ground LLM answers in enterprise knowledge.
- Integrate AI agents with SAP ECC/S4HANA, SAP Hybris, Salesforce, Jira and Xray to automate test design, execution tracking and reporting across enterprise landscapes.
- Engineer and tune prompts and agent instructions for enterprise-grade QA pipelines, working closely with QA leads and stakeholders to deliver reliable, production-ready solutions.

Analyst – Agentic AI & Test Automation | **KPMG** *Aug 2025 – Aug 2026*

- Architected and delivered multi-agent AI solutions for test automation using the Google Agent Development Kit (ADK) and Gemini, reducing manual testing effort by streamlining end-to-end test orchestration.
- Designed inter-agent communication protocols for multi-agent systems, improving pipeline throughput and reducing handoff latency across agent boundaries.
- Led prompt engineering initiatives to generate human-readable, enterprise-grade test cases via LLMs, cutting test authoring time significantly.
- Collaborated with QA leads to integrate GenAI tooling into existing CI/CD pipelines, increasing automation coverage across test cycles.

Consulting Intern – Generative AI & Test Automation | **KPMG** *Jan 2025 – Jul 2025*

- Contributed to a GenAI solution that automated test case generation for enterprise software, reducing manual test authoring effort through LLM-powered generation.
- Applied prompt engineering and few-shot techniques to improve test case accuracy and readability across heterogeneous enterprise application domains.
- Built and integrated GenAI tooling into existing testing pipelines, improving test coverage scalability for large-scale deployments.
- Completed intensive Java Full Stack training (Spring Boot, Angular, MySQL), directly applied in full-stack project delivery within the same internship period.

PROJECTS

Agentic RAG with Knowledge Graph | *Python, Google ADK, Pinecone, Render, Netlify*

- Built an agentic RAG system with Google ADK that ingests user-provided documents, runs the full RAG pipeline and answers user queries with source citations.
- Used Pinecone as the vector database for embedding storage and semantic retrieval, enabling accurate, grounded answers over uploaded documents.
- Generated and visualized an interactive Knowledge Graph of entities and relationships extracted from documents, helping users explore content beyond Q&A.
- Deployed the backend on Render and the frontend on Netlify, delivering a live, end-to-end AI web application.

AI-Powered MediKit | *Python, PyTorch, OpenCV, Pygame, Pillow*

- Built a multi-modal medical assistant combining Vision Transformer (ViT) for image diagnosis, MFCC for heartbeat analysis, and a text-similarity chatbot—demonstrating end-to-end deep learning system design.
- Implemented few-shot tablet classification and herbal remedy search, enabling robust diagnosis under low-data constraints typical of rural telehealth scenarios.
- Proposed YOLO-based real-time diagnosis and GenAI-powered medical bots as scalable extensions, with a hardware roadmap for vital-sign monitoring.

Appointment Booking System | *Java Spring Boot, Angular, MySQL*

- Developed a full-stack booking platform enabling patients to select hospitals, departments, and doctor time slots, with live availability management and a post-appointment review workflow.
- Designed a Spring Boot REST API backend with dynamic scheduling logic and an Angular SPA frontend, delivering a responsive, role-based user experience.

TECHNICAL SKILLS

Languages: Python, Java, SQL

AI / ML: Agentic AI, Multi-Agent Systems, RAG (Retrieval-Augmented Generation), Knowledge Graphs, LLMs, Prompt Engineering, Google ADK, Gemini, Vector Embeddings, Semantic Search, Machine Learning, Deep Learning

Frameworks: Spring Boot, Angular, Flask, PyTorch, OpenCV

Cloud & Deployment: Google Cloud Platform (GCP), Cloud SQL, Render, Netlify

Databases: Pinecone (Vector DB), PostgreSQL, MySQL, Supabase

Testing & Integration: Test Automation, QA Automation, CI/CD, REST APIs, Jira, Xray, SAP ECC/S4HANA, SAP Hybris, Salesforce

Tools: GitHub, VS Code, PyCharm

EDUCATION

University of Visvesvaraya College of Engineering (UVCE) — *Jan 2021 – Aug 2025*
B.Tech – Artificial Intelligence & Machine Learning **— CGPA: 8.7 / 10** — *Bengaluru, India*

Akshara PU College — *Jun 2019 – Jul 2021*
PUC – PCMB **— 95.1%** — *Shikaripur, Karnataka*
